Dhara

How to Use — staff and manager guide

Milk QC & receiving · Production · Cold room stock · Dispatch · Returns & damage · Daily count · General store · Reports

What is in this guide

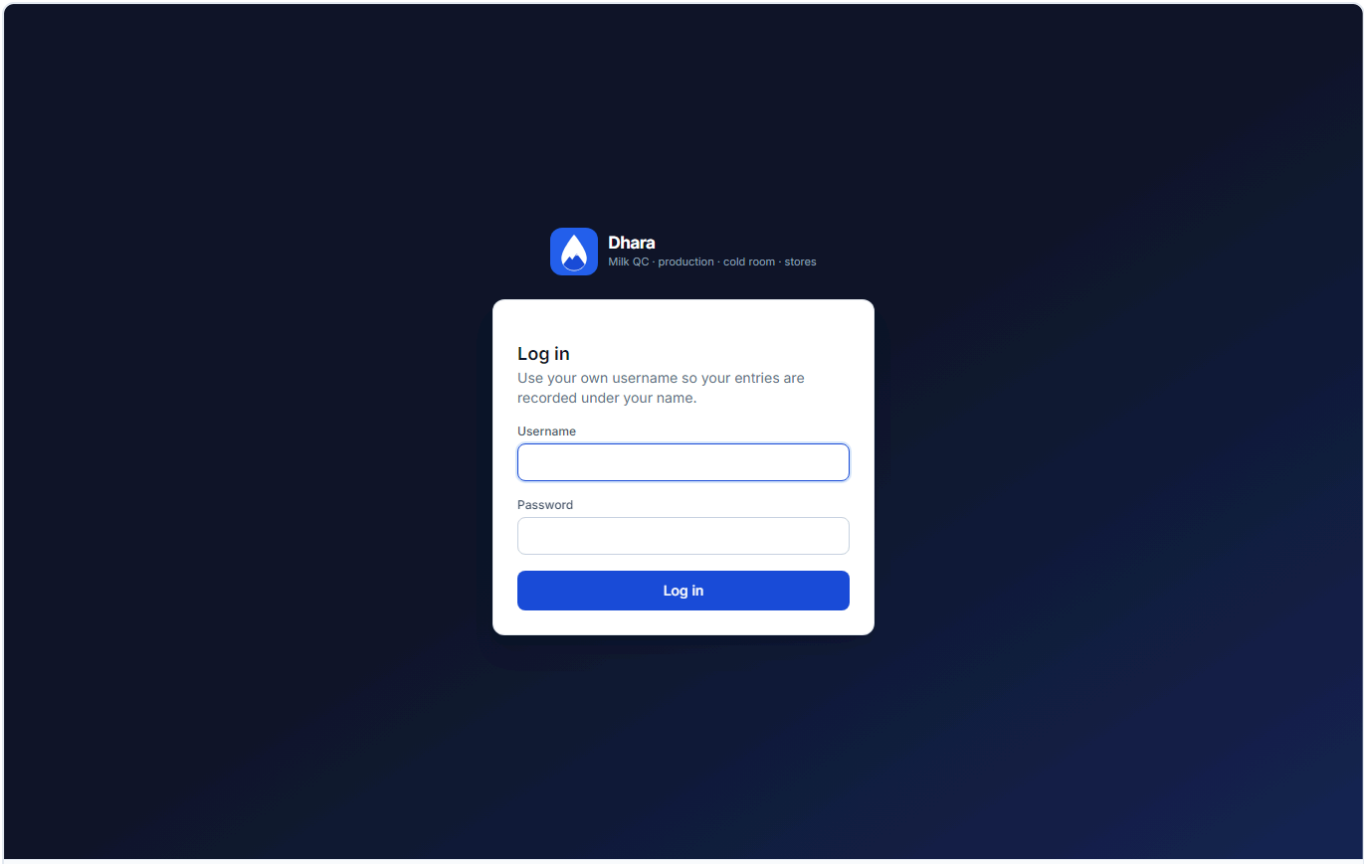

1. Getting started
2. A day in the plant
3. Milk QC entry
4. Production batch
5. Cold room stock
6. Dispatch (Market Going)
7. Returns, damage and receipts
8. Daily count
9. General store
10. Reports and Excel
11. Manager and admin tasks
12. Going live checklist
13. Messages and what they mean
14. Quick reference

Screens in this guide come from a test day entered in the system. Your numbers, product list and names will be your own.

1. Getting started

Open the system and log in

1. Open the web browser (Chrome or Edge) on the computer or phone and go to the address your administrator gave you, for example `http://localhost:3000` on the plant computer.
2. Type **your own** username and password and press `Log in`. Every entry is saved with your name, so never use someone else's login.

Login screen

Who can do what

Role	Enters	Can only view
Receiving / QC	Milk QC entry, unloading into silos, silo dips	Dashboard
Production Supervisor	Production batches, silo dips	Cold room stock, general store
Store Keeper	Returns, damage, receipts, daily count, dispatch challans, general store	Production, reports
Dispatch Officer	Dispatch challans	Cold room stock, reports
Accounts	Nothing (view only)	Receiving, cold room, dispatch, store, reports
Plant Manager	Everything above, plus cancelling wrong entries, booking count differences, opening stock, masters and settings	—
Owner / Admin	Everything, plus users	—

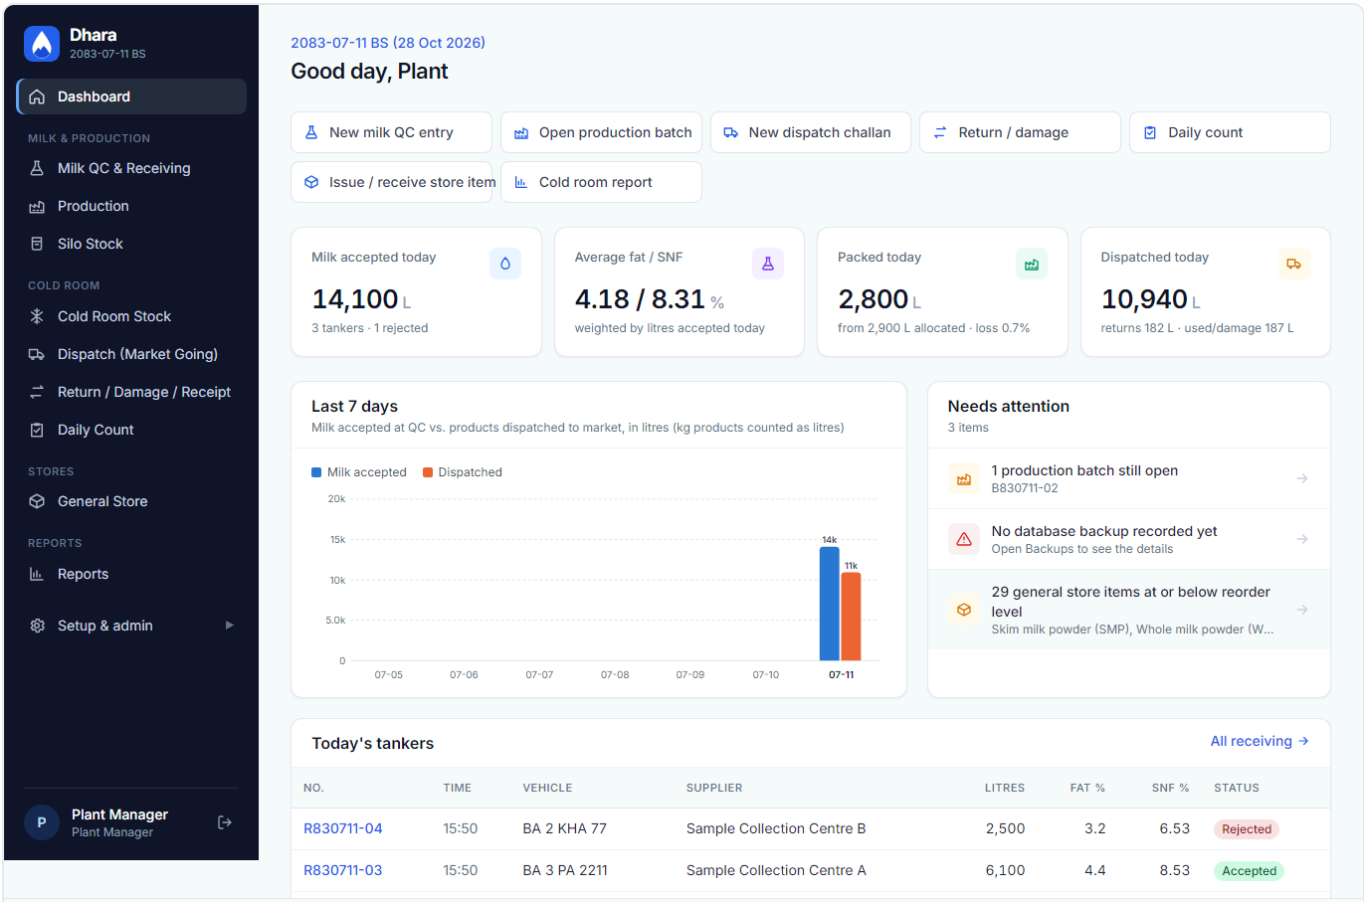

The screen

- **Left menu** — grouped the way the day runs: *Milk & production*, *Cold room*, *Stores*, *Reports*. You only see the parts your role can use. The page you are on is highlighted.
- **Setup & admin** (managers only) — click to open products, store items, suppliers, distributors, vehicles, settings, users and the audit log.
- **Your name** is at the bottom of the menu; the arrow next to it logs you out.
- **Dates** are shown in Bikram Sambat first with the English date in brackets, e.g. *2083-07-11 BS (28 Oct 2026)*. Date boxes you type into use the English calendar.

> **Green and red messages.** After every save a green bar at the top tells you exactly what was saved. A red bar tells you what is wrong and nothing was saved — correct it and save again.

The dashboard

The first page after login. It shows today at a glance and what needs doing.

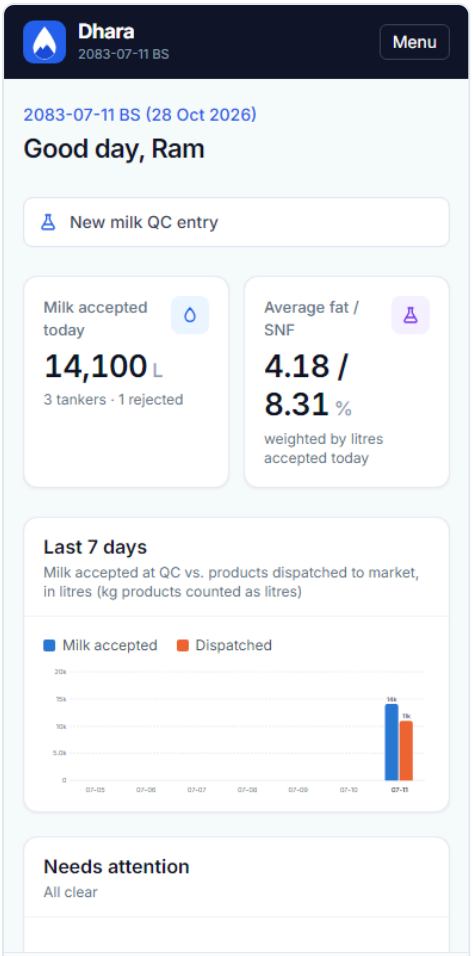

Dashboard (Plant Manager)

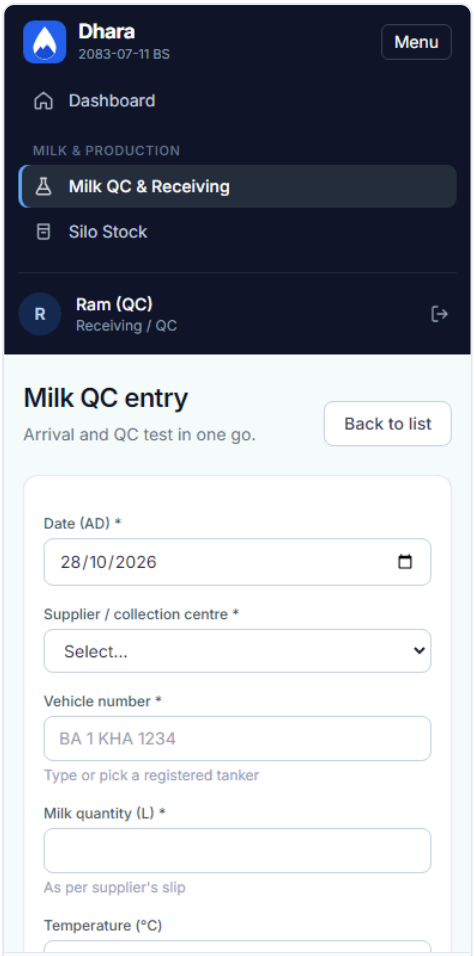

1. **Quick buttons** along the top go straight to the most common entries for your role.
2. **Today's numbers**: milk accepted at QC, average fat / SNF, litres packed with loss %, and litres dispatched with returns and damage. Click a box to open that page.
3. **Last 7 days** chart: milk accepted (blue) against products dispatched (orange). Point at a bar to see the exact litres.
4. **Needs attention**: tankers waiting for QC, batches still open, challans not dispatched, lots expiring, negative stock, today's count not done, and store items to reorder. Click a line to fix it.

Using a phone

Everything works on a phone. Tap Menu at the top to open the menu. Number boxes open the number keypad.

Phone dashboard

Phone menu

2. A day in the plant

The system follows the milk from the gate to the market. Each step is entered by the person doing it, at the time it happens.

1 · Gate / QC
Each tanker: quantity, temperature, fat, lacto, adulteration → Accept or Reject. *QC*

2 · Production
Open a batch, allocate milk, add SMP, enter output, close. Stock goes to the cold room. *Production*

3 · Market Going
Make a challan per vehicle, add products, dispatch, print. *Dispatch / Store*

4 · Returns & damage
Goods back from market, used or damaged. *Store*

5 · Evening count
Count the cold room, enter it, explain differences. *Store → Manager*

6 · Report
Cold Room Record for the day, Excel download. *Manager / Accounts*

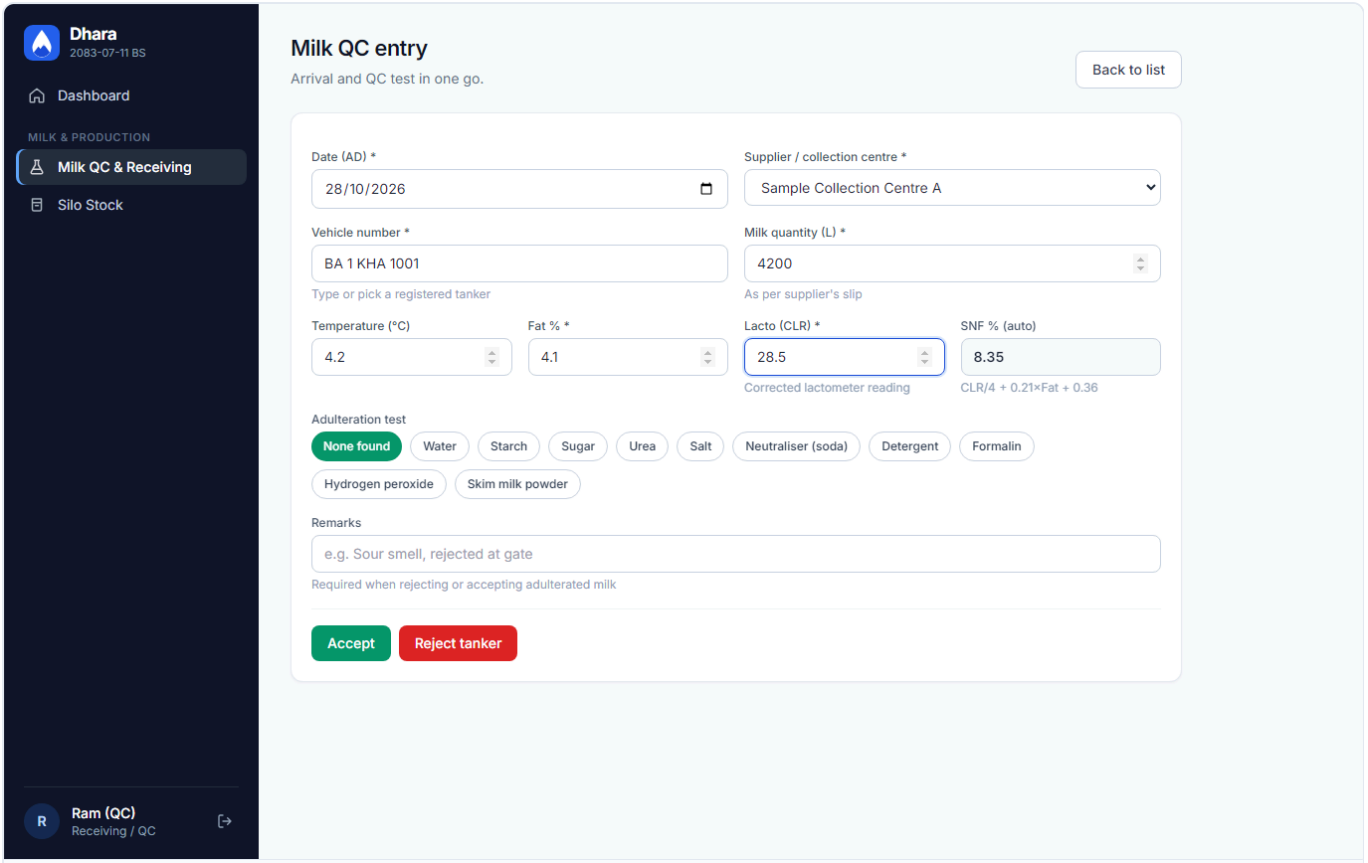

The cold room balance. For every product, every day:
Stock = Opening + Production − Market Going + Market Return − Used/Damage ± Count adjustment
This is the same sum as the Excel *Coldroom Record*. You never type the opening or the stock — the system works them out from the entries.

No deleting. Wrong entries are not deleted. A manager **cancels** them with a reason; the stock is put back and the cancelled line stays visible (crossed out) so there is always a record.

3. Milk QC entry

One screen for each tanker: arrival details and the QC test together.

1. Menu **Milk QC & Receiving** → `+ New QC entry` (or the dashboard button *New milk QC entry*).
2. Check the **date** (today is filled in) and choose the **supplier / collection centre**.
3. Type the **vehicle number** — registered tankers pop up as you type.
4. Enter the **milk quantity (L)** from the supplier's slip and the **temperature**.
5. Enter **Fat %** and the **Lacto (CLR)** reading. **SNF % is worked out by itself** as you type and is shown in the grey box.
6. Adulteration: leave `None found` green, or tap each adulterant found (Water, Starch, Urea …) — they turn red.
7. Press `Accept` or `Reject tanker`. The form clears, ready for the next tanker.

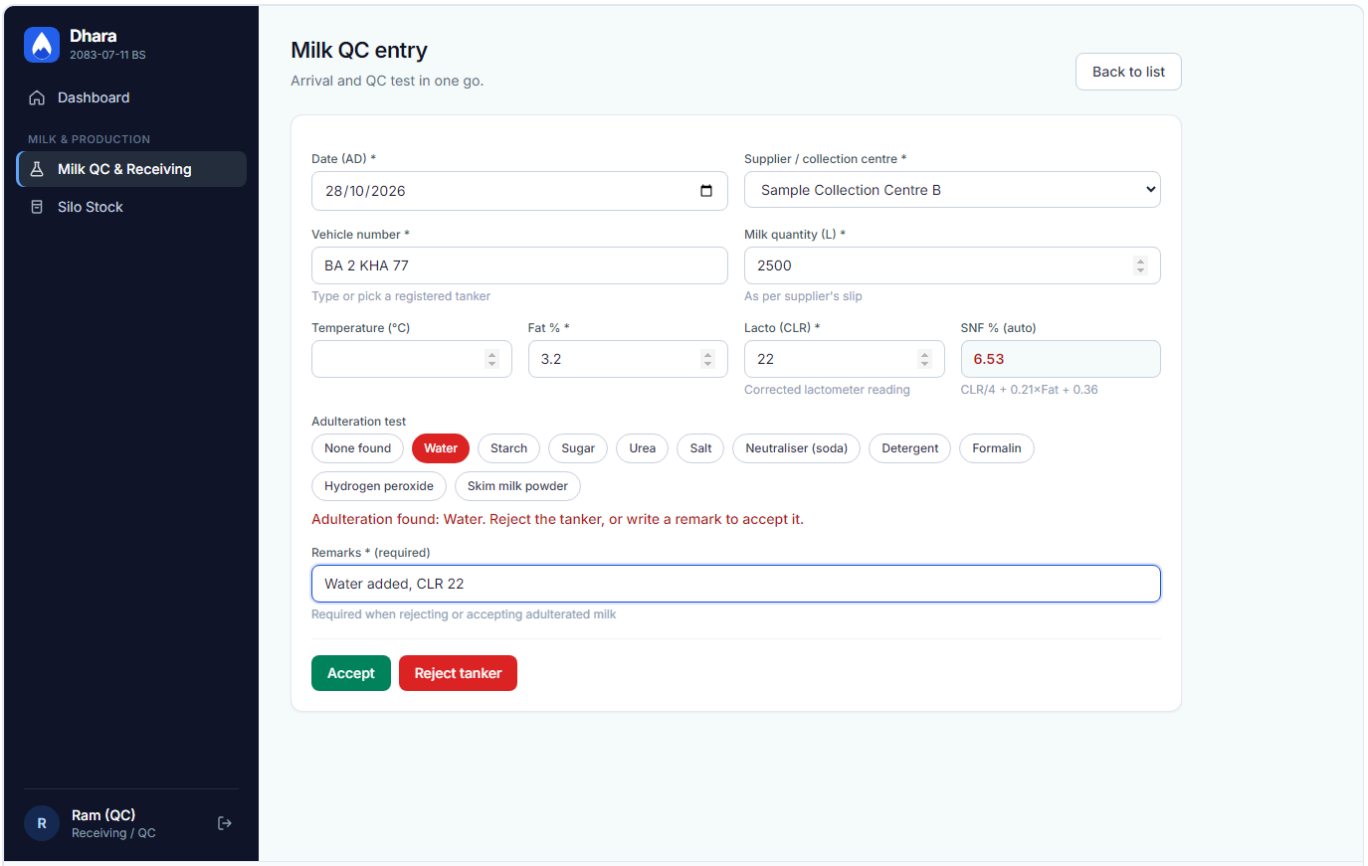

QC entry — SNF 8.35 calculated from CLR 28.5 and fat 4.1

SNF formula: SNF % = CLR ÷ 4 + 0.21 × Fat % + 0.36 (ISI / BIS). A manager can change the numbers in *Setup → Tolerances & Settings*. Enter the **corrected** lactometer reading (CLR).

Remarks are required when you reject a tanker (the remark is the rejection reason) and when you accept milk with adulteration found. The system will not save until you write one.

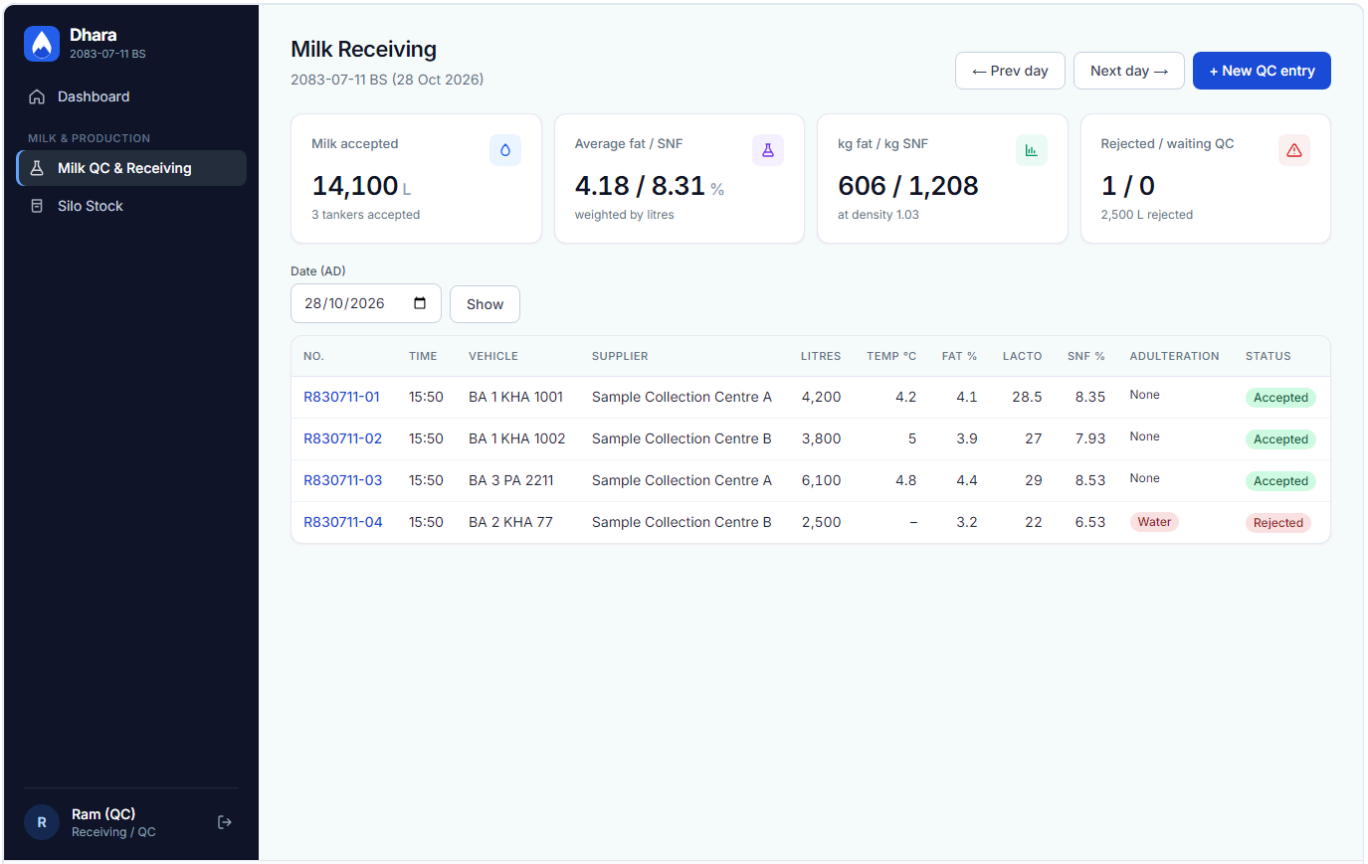

Rejecting, and the receiving list

Rejecting a tanker — Water found, remark written

Receiving list

Menu **Milk QC & Receiving** shows every tanker of the day with temperature, fat, lacto, SNF and adulteration. The boxes at the top give total milk accepted, weighted average fat / SNF, kg fat / kg SNF, and rejected / waiting tankers. Use ← Prev day / Next day → or the date box to see another day. Click a receipt number to open it.

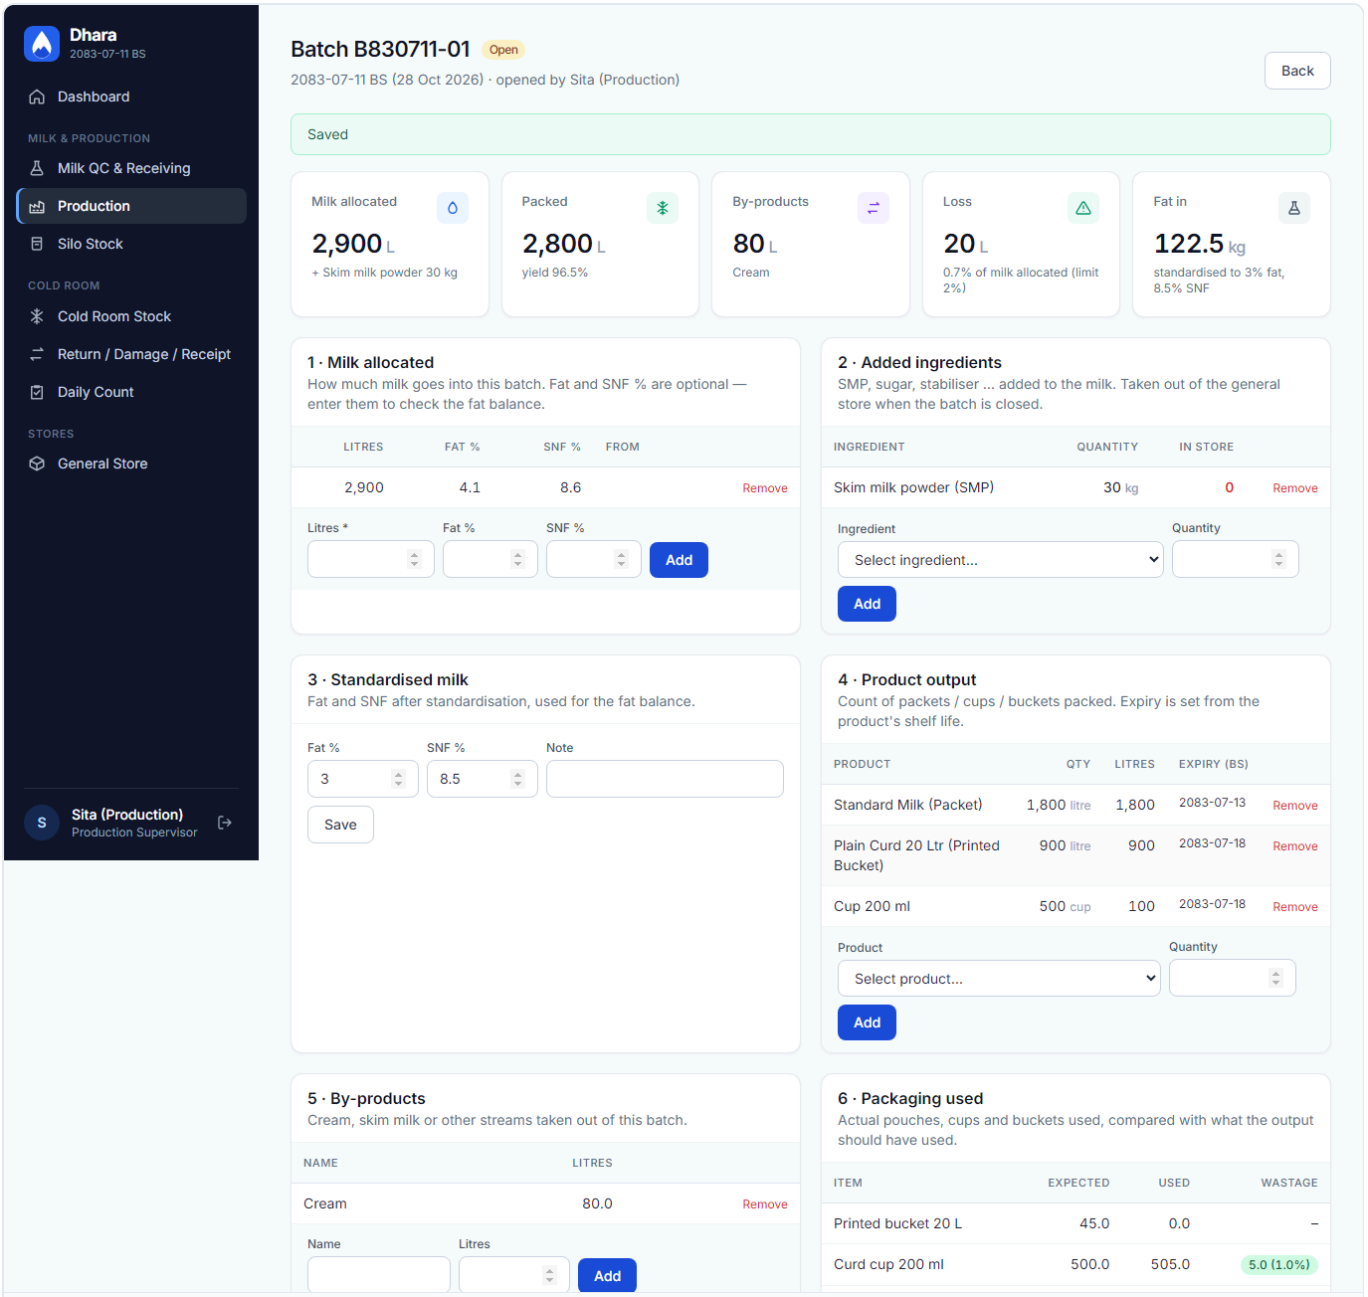

Receiving list for the day

Unloading into a silo is optional. If you track silos, open an accepted tanker and use *Unload into silo* (dip reading or litres). Otherwise you can ignore it.

4. Production batch

One batch per production run. Closing the batch sends what was packed into the cold room.

1. Menu **Production** → check the date → `+ Open new batch`. A batch number like *B830711-01* is given.
2. **1 · Milk allocated** — litres going into the batch (fat % and SNF % optional). Add more lines if the milk comes in parts.
3. **2 · Added ingredients** — SMP, sugar, stabiliser … and the quantity. It is taken out of the general store when the batch is closed. The *In store* column turns red if the store does not have enough.
4. **3 · Standardised milk** — fat % and SNF % after standardisation, then `Save`.
5. **4 · Product output** — choose each product and the quantity packed (packets / cups as whole numbers; kg or litre products can have decimals). Expiry is set from the product's shelf life.
6. **5 · By-products** — e.g. Cream, 80 L.
7. **6 · Packaging used** — pouches, cups, buckets actually used. The system shows what should have been used and the wastage.
8. Check the boxes at the top, then press `Close batch`.

Batch with milk, SMP, standardisation, three outputs, cream and packaging

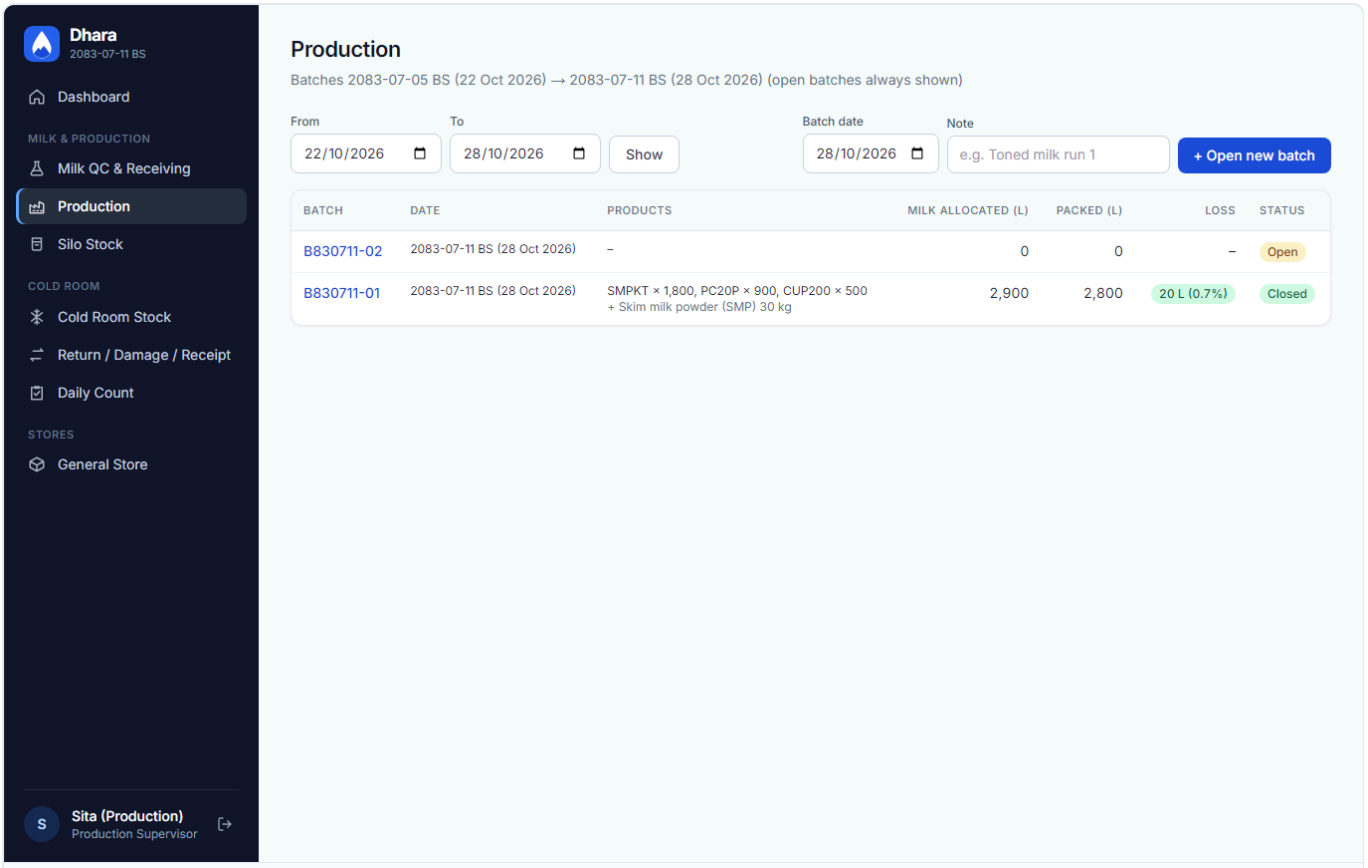

Loss, closing and the batch list

Loss = milk allocated − litres packed − by-products. The Loss box is green, amber or red against the limit in *Tolerances & Settings* (default red above 2%). **If it is red, write a closing note** explaining it, e.g. "pouch machine jam" — the batch will not close without one.

A closed batch is locked. Check the output carefully before closing. A batch opened by mistake can be cancelled by a manager *before* it is closed.

Batch list

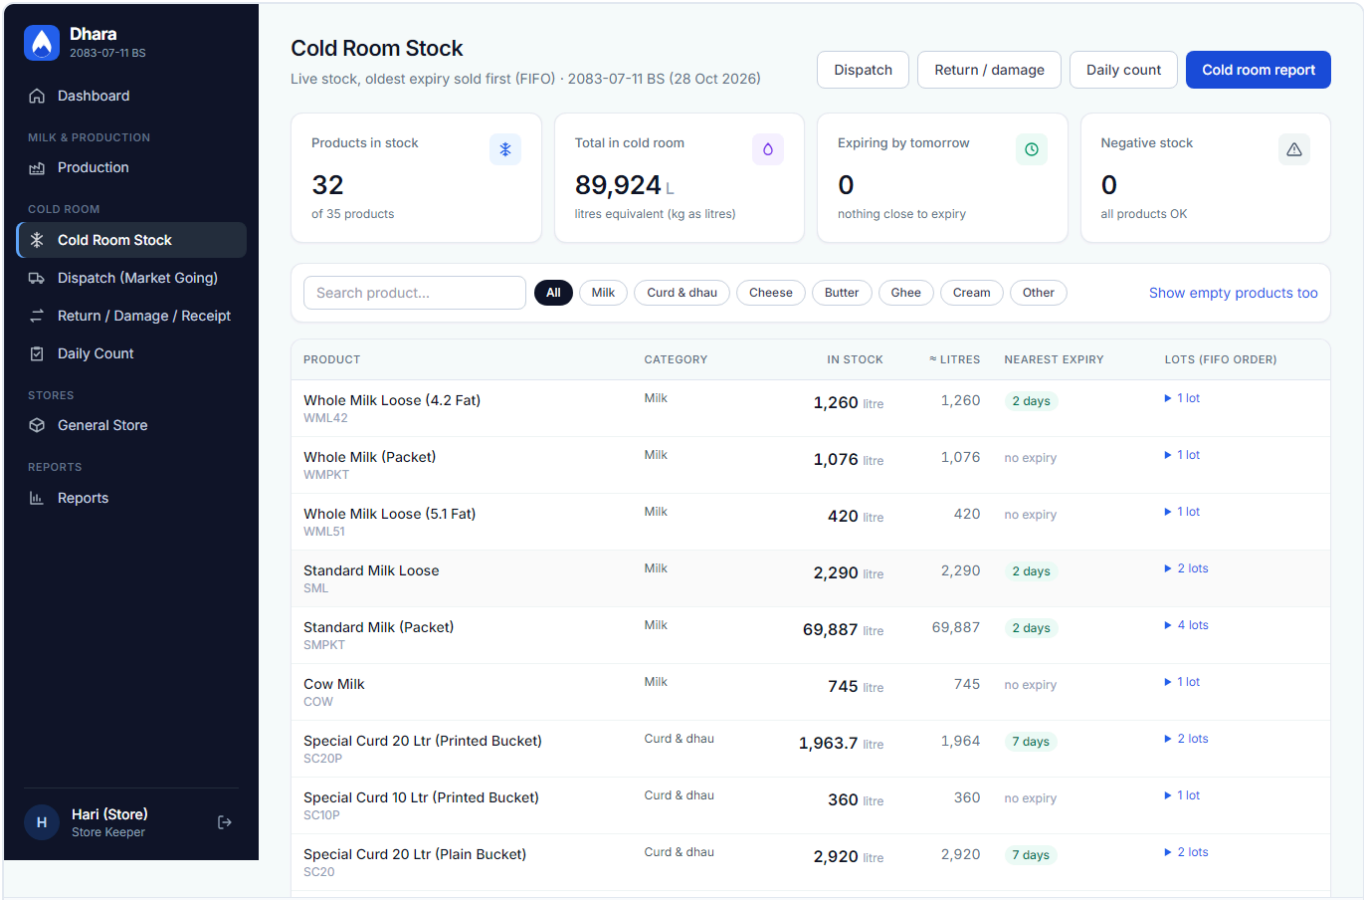

Menu **Production** lists the last 7 days of batches (change *From / To* for others) with the products, ingredients added, milk allocated, litres packed and loss.

Production list

5. Cold room stock

What is in the cold room now, product by product.

Cold Room Stock

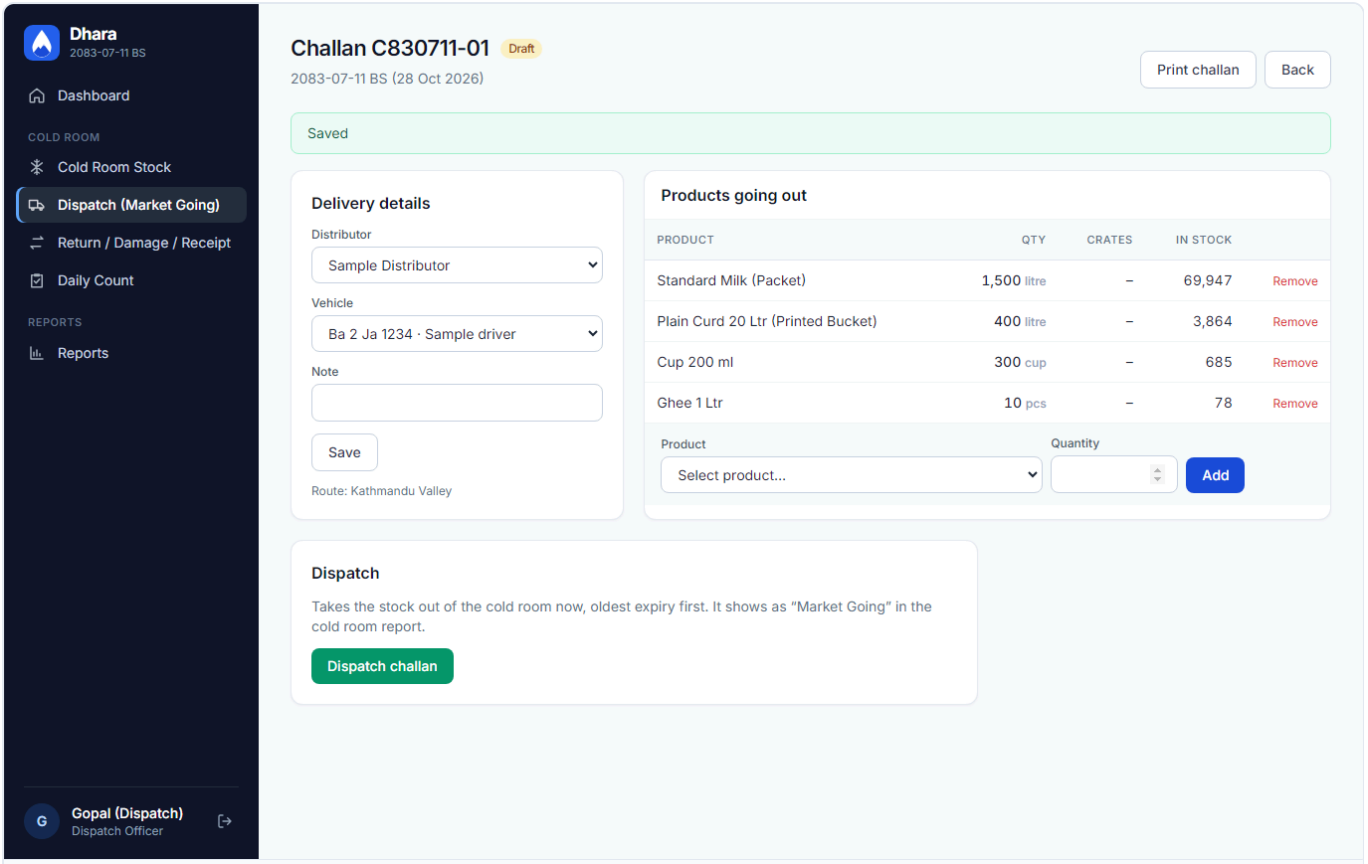

- The boxes at the top show products in stock, total litres, lots expiring by tomorrow and any negative stock.
- **Search** by name, or click a **category** (Milk, Curd & dhau, Cheese, Butter, Ghee …). *Show empty products too* lists products with zero stock.
- **Nearest expiry** is green (fine), amber (today / tomorrow) or red (expired).
- Click *"2 lots"* to see each batch / lot with its expiry. Lots without expiry are opening stock, market returns and count adjustments.

> **FIFO.** When stock goes out (dispatch, damage) the system takes it from the oldest expiry first, automatically.

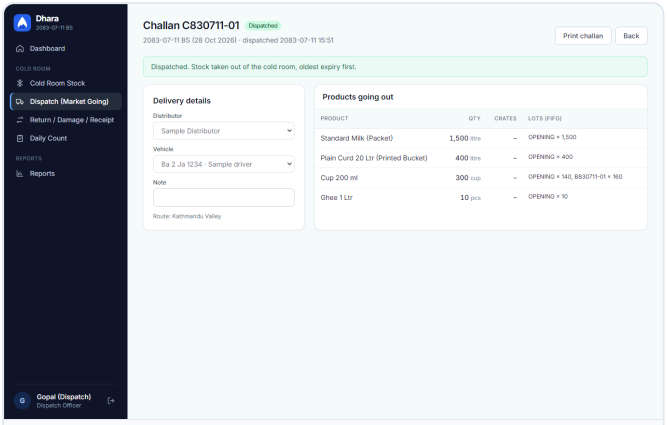

6. Dispatch (Market Going)

One challan per vehicle trip or distributor.

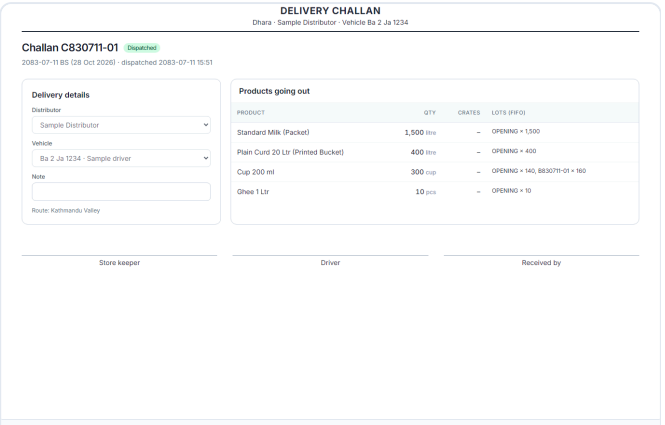

1. Menu **Dispatch (Market Going)** → choose the date, **distributor** and **vehicle** → `+ New challan`.
2. On the challan, choose a **product** (the list shows the stock) and the **quantity** → `Add`. Repeat for each product. Adding the same product again adds to its line.
3. The *In stock* column turns red if there is not enough; the `Dispatch challan` button stays grey until it is fixed.
4. Press `Dispatch challan`. The stock leaves the cold room (oldest expiry first) and shows as **Market Going** in the report.
5. Press `Print challan` to print it for the driver, with signature lines.

Draft challan with four products

After dispatch — the lots each product came from

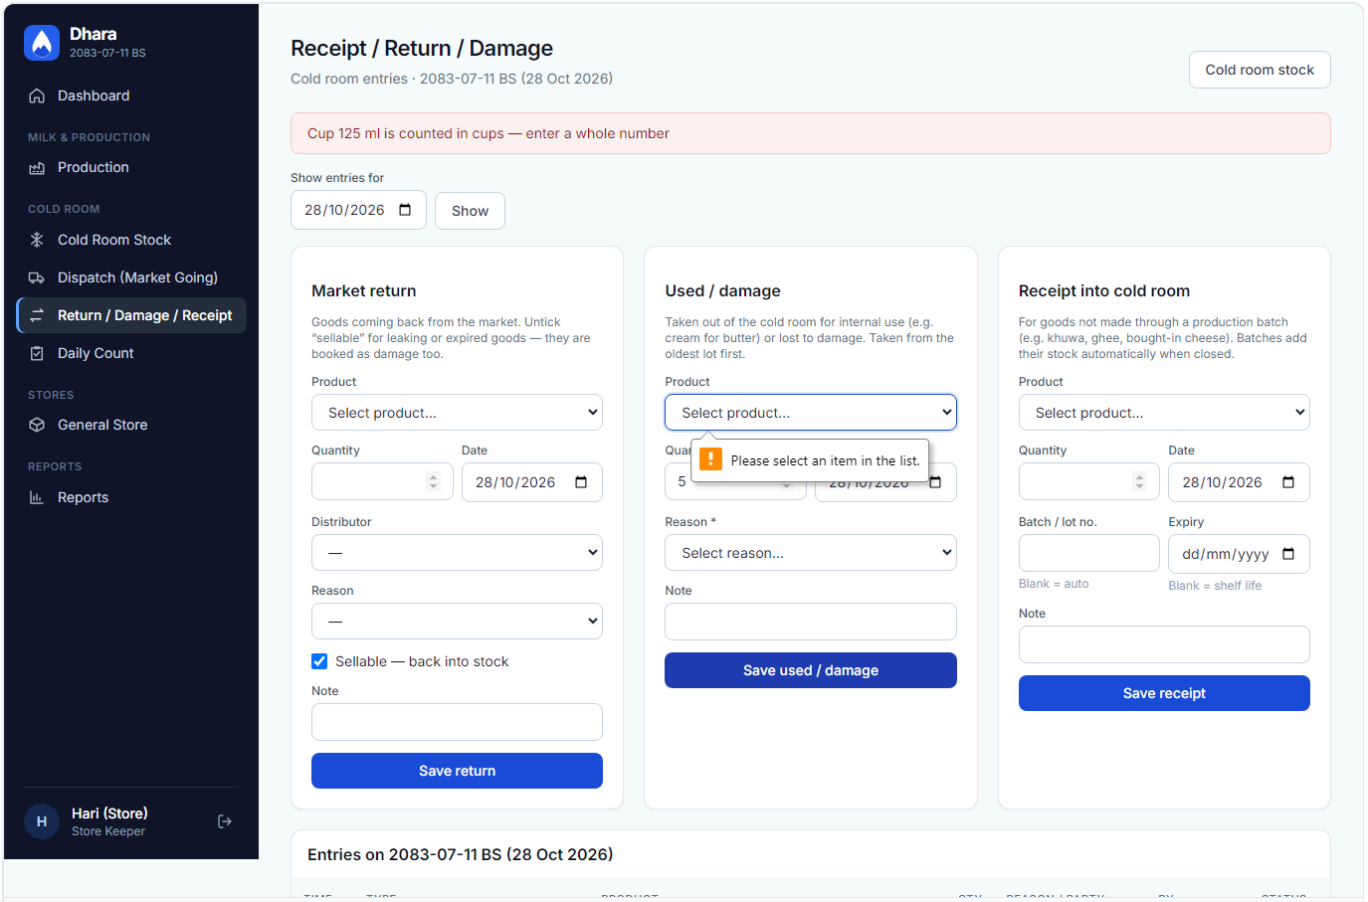

Printed challan

A wrong challan can be cancelled by a manager (*Cancel challan*, with a reason). If it was already dispatched, the stock goes back into the cold room.

7. Returns, damage and receipts

Menu **Return / Damage / Receipt**. Each box is one entry: choose product, quantity, date, and save.

Return / Damage / Receipt, with the day's entries below

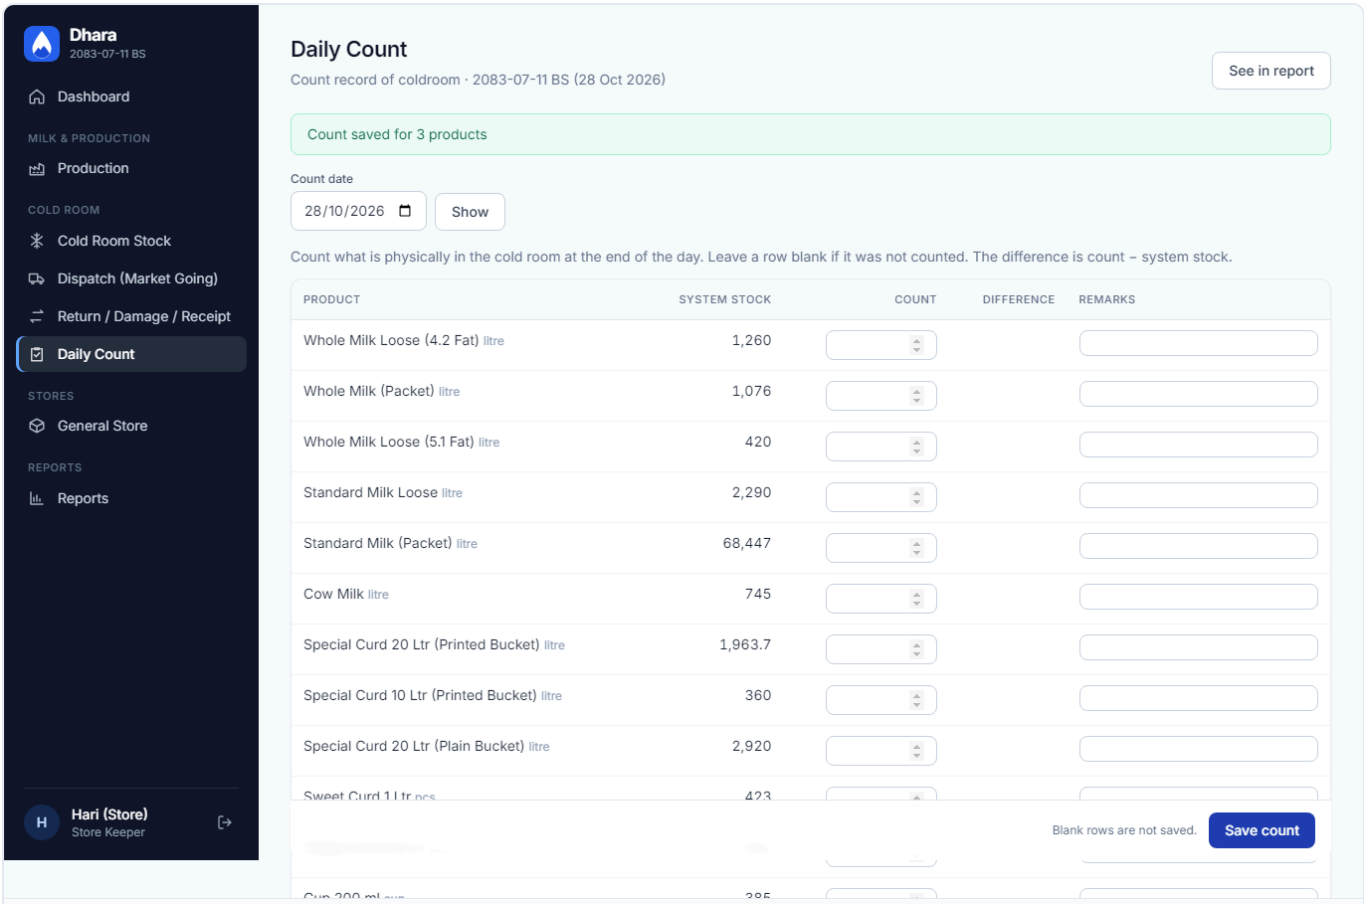

Use	When	Shows in report as
Market return	Goods come back from the market. Leave *Sellable* ticked if they go back on sale; untick it for leaking / expired goods.	Market Return (unsellable also in Used/Damage)
Used / damage	Taken out for internal use (e.g. cream for butter) or lost to damage. Pick the reason.	Used / Damage
Receipt into cold room	Goods not made in a production batch (e.g. khuwa, ghee, bought-in cheese).	Today's collection / Production
Opening stock (manager)	Only when starting to use the system — see chapter 12.	Opening balance

> Every product box starts on "*Select product...*" — you must choose one. Packets, cups and pieces must be whole numbers; kg and litre products may have decimals (e.g. 8.5 kg).

8. Daily count

The "Count Record of Coldroom" column, done at the end of the day.

1. Menu **Daily Count**. The **System stock** column is what the system expects.
2. Count each product in the cold room and type the number in **Count**. Leave a row blank if you did not count it.
3. Write a **remark** for any product that is different (e.g. "two cans not booked").
4. Press Save count (the bar stays at the bottom of the screen). The **Difference** appears: green 0 = matches, red = different.

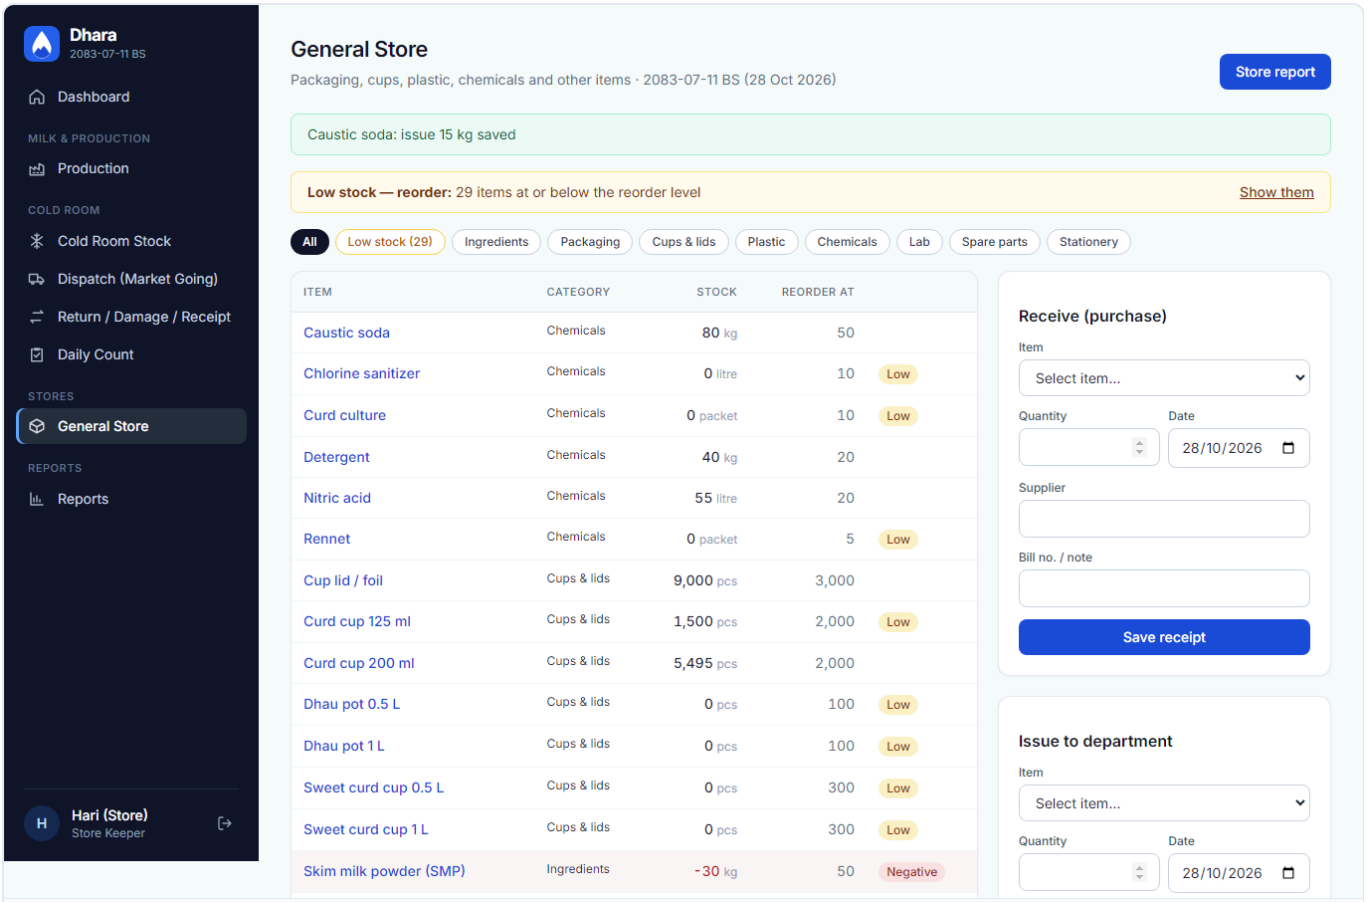

Daily count — Cream counted 700 against 538 in the system

Manager — book the differences. When a manager opens the count, a red box Book N differences appears. Pressing it posts a count adjustment so the system stock equals the count. The difference and remark stay in the report. After booking, those rows cannot be changed.

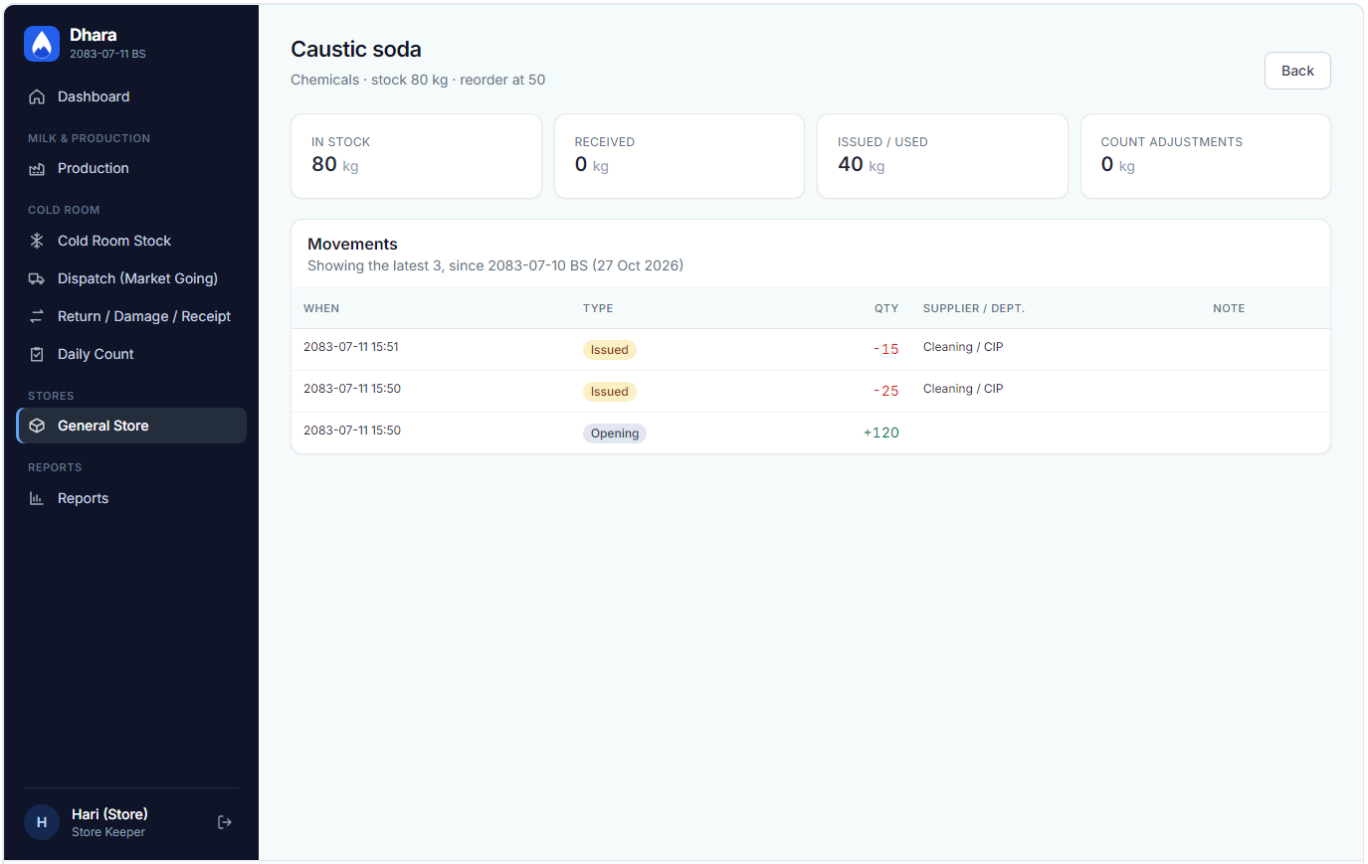

9. General store

Ingredients (SMP, sugar …), packaging, cups & lids, plastic, chemicals, lab items, spare parts and stationery.

General Store — stock, low-stock flags and the three entry forms

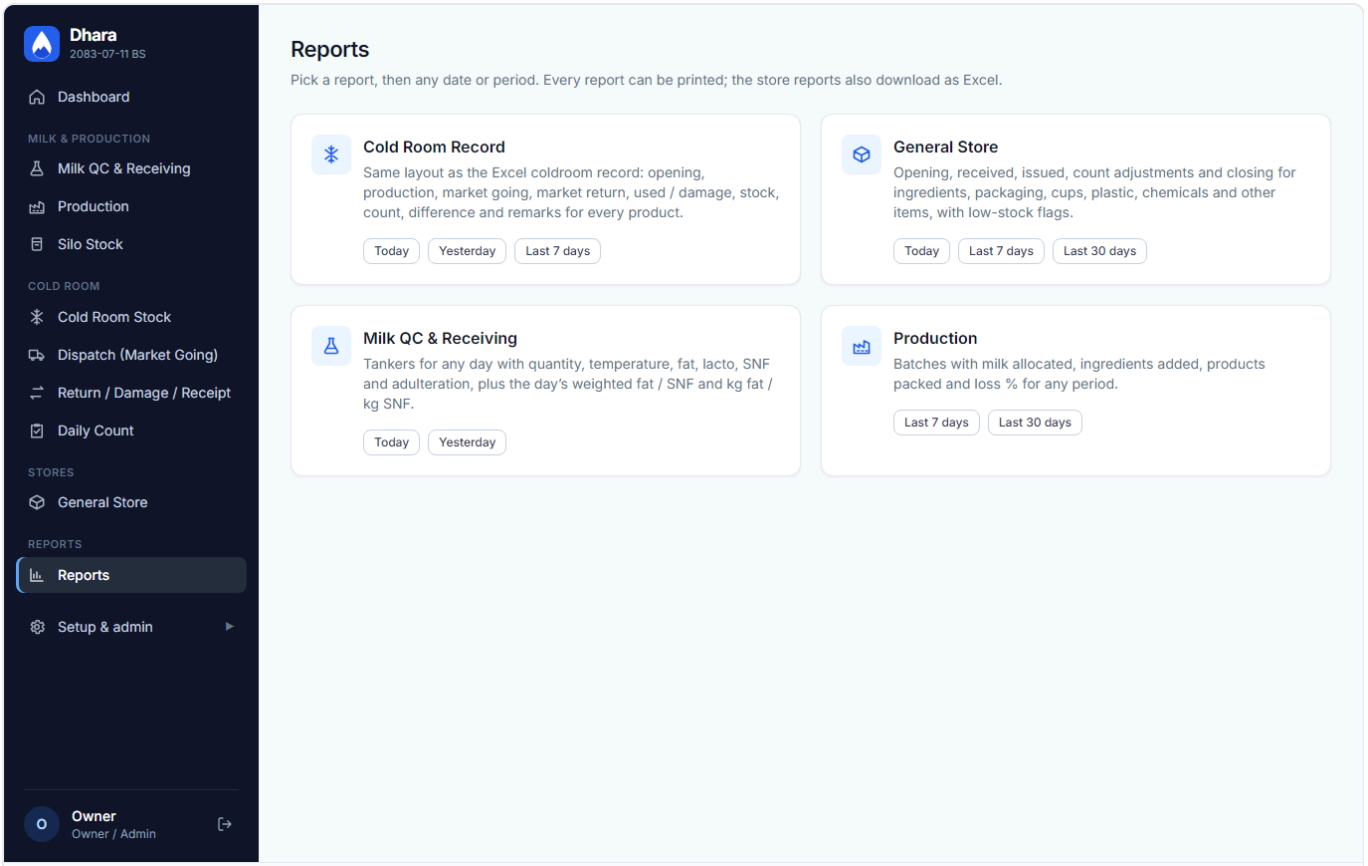

- **Receive (purchase)** — item, quantity, supplier, bill number.
- **Issue to department** — item, quantity and the department (Production, Lab / QC, Cleaning / CIP, Maintenance …). You cannot issue more than is in stock.
- **Physical count** — type what is on the shelf; the difference is booked automatically.
- **Low stock** — items at or below their reorder level are marked *Low*; click `Low stock` to see only those. Negative stock is marked red.
- Ingredients and packaging used in a closed production batch are taken out automatically ("Used in batch").
- Click an item name to see all its movements.

One item's movements

10. Reports and Excel

Menu **Reports** → pick a report and a quick period (Today, Yesterday, Last 7 days …) or any dates.

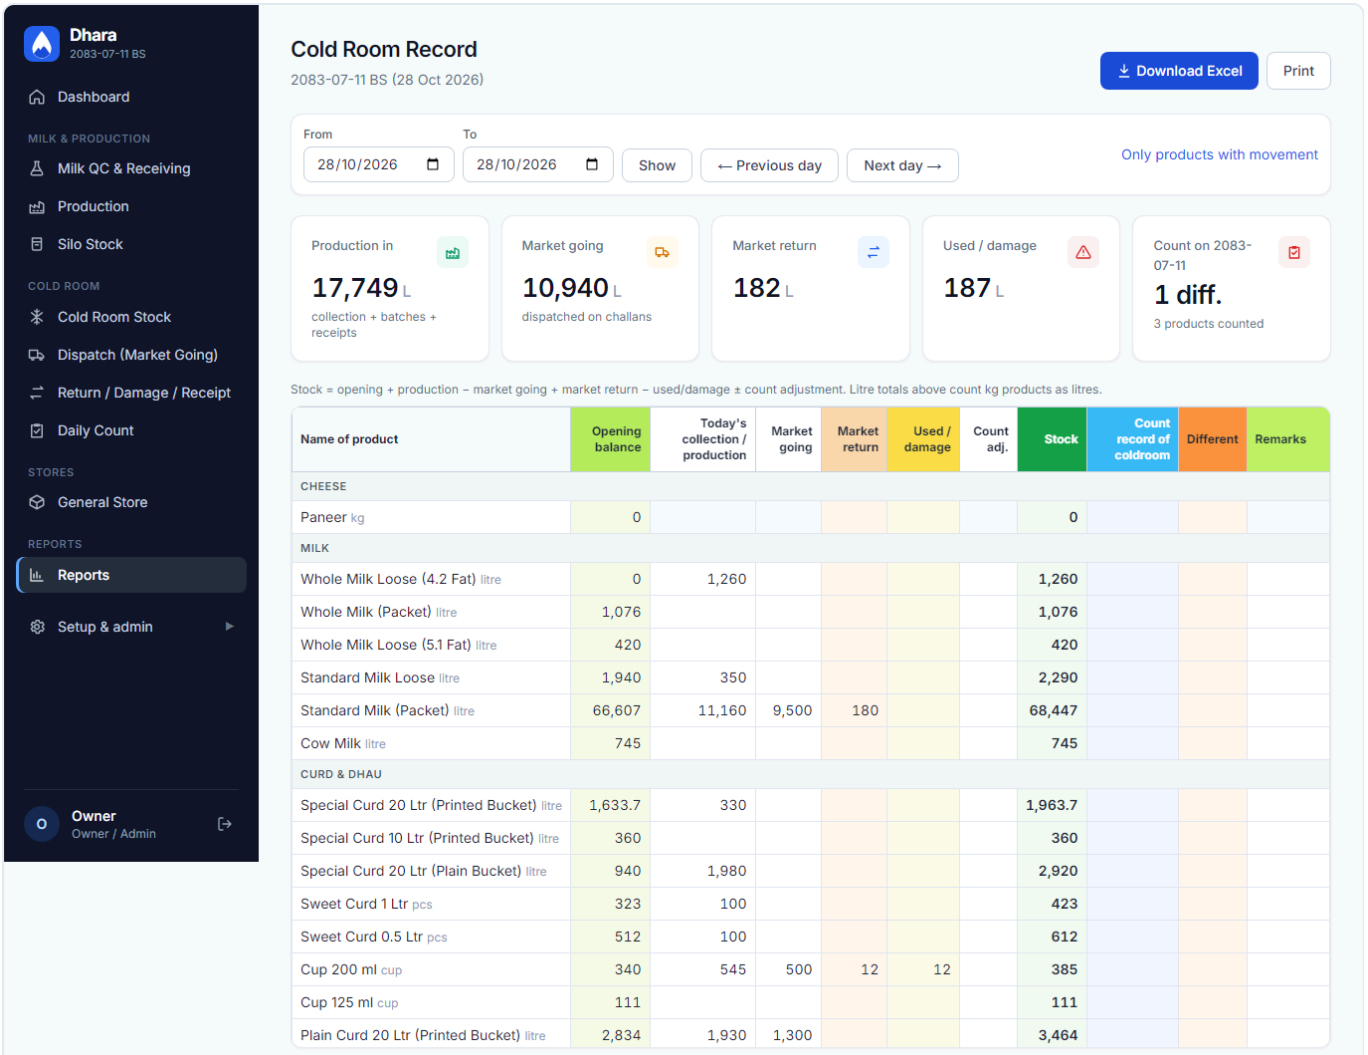

Reports page

Cold Room Record

The same columns and colours as the Excel *Coldroom Record*:

Opening balance	Today's collection / production	Market going	Market return	Used / damage	Count adj.	Stock	Count record	Different	Remarks
Stock at the start	Batches closed + receipts	Dispatched challans	Returns	Used + damage	Booked count differences	Stock at the end	Daily count	Count − stock	From the count

- `← Previous day` / `Next day →` move one day. *Only products with movement* hides products with nothing happening.
- `Download Excel` gives an .xlsx file in the same layout. For a period you get a summary sheet **plus one sheet per day**, like your monthly workbook.
- `Print` prints the report on A4 landscape.

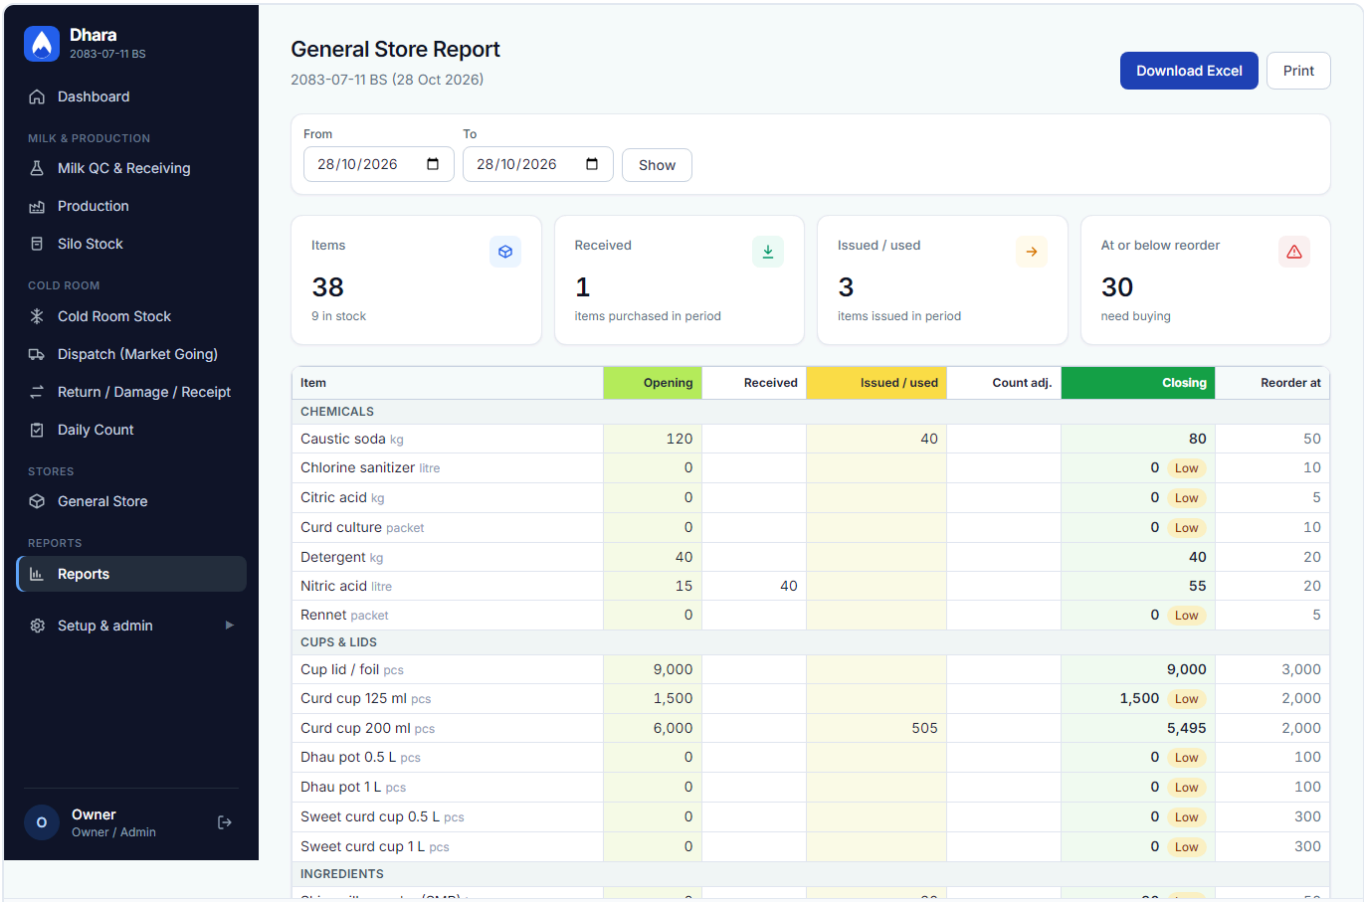

Name of product	Opening balance	Today's collection / production	Market going	Market return	Used / damage	Count adj.	Stock	Count record of coldroom	Different	Remarks
CHEESE										
Paneer kg	0						0			
MILK										
Whole Milk Loose (4.2 Fat) litre	0	1,260					1,260			
Whole Milk (Packet) litre	1,076						1,076			
Whole Milk Loose (5.1 Fat) litre	420						420			
Standard Milk Loose litre	1,940	350					2,290			
Standard Milk (Packet) litre	66,607	11,160	9,500	180			68,447			
Cow Milk litre	745						745			
CURD & DHAU										
Special Curd 20 Ltr (Printed Bucket) litre	1,633.7	330					1,963.7			
Special Curd 10 Ltr (Printed Bucket) litre	360						360			
Special Curd 20 Ltr (Plain Bucket) litre	940	1,980					2,920			
Sweet Curd 1 Ltr pcs	323	100					423			
Sweet Curd 0.5 Ltr pcs	512	100					612			
Cup 200 ml cup	340	545	500	12	12		385			
Cup 125 ml cup	111						111			
Plain Curd 20 Ltr (Printed Bucket) litre	2,834	1,930	1,300				3,464			

Cold Room Record for the day

General Store report

Opening, received, issued / used, count adjustments and closing for every item, grouped by category, with low-stock flags. Also prints and downloads as Excel.

General Store report

11. Manager and admin tasks

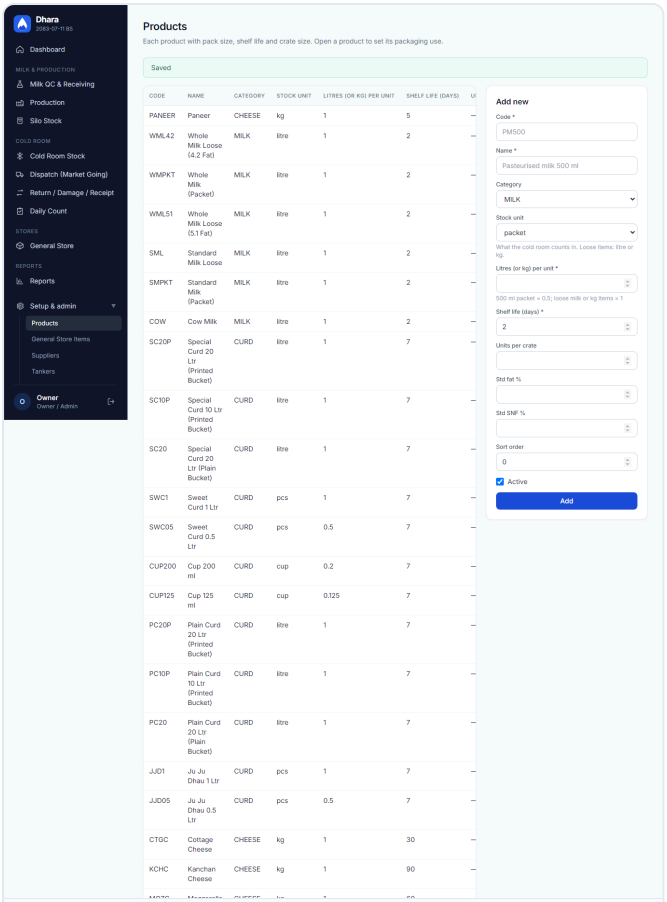

Correcting mistakes

Wrong entry	How to correct (manager)
Return / damage / receipt	Return / Damage / Receipt page → the entry's row → write a reason → *Cancel*. Stock is reversed.
Challan	Open the challan → *Cancel challan* with a reason. Dispatched stock goes back.
Tanker (QC)	Open the tanker → *Cancel this entry* with a reason.
Open batch	Open the batch → *Cancel batch*. (A closed batch cannot be cancelled — correct the stock with Used / damage or the count.)
General store movement	General store → the movement → reason → *Cancel*.
Count difference	Daily Count → *Book N differences*.

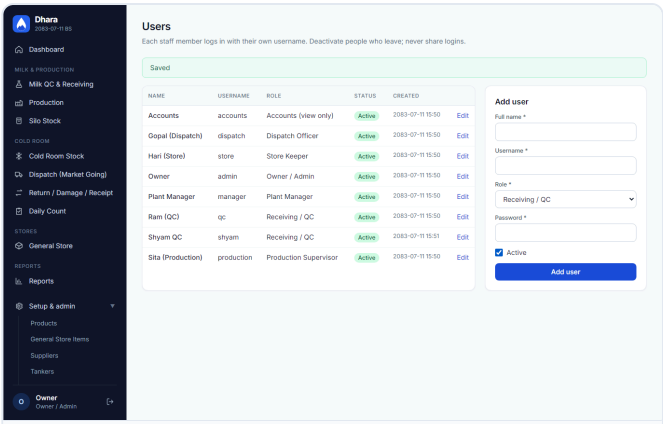

Setup & admin (left menu)

- **Products** — name, category, stock unit (packet, cup, pcs, litre, kg), litres per unit, shelf life, sort order. Click *Packaging* on a product to set how many cups / pouches one unit uses.
- **General Store Items** — name, category (use *INGREDIENT* for SMP, sugar …), unit and reorder level.
- **Suppliers, Tankers, Distributors, Routes, Vehicles** — the lists used in the forms.
- **Tolerances & Settings** — green / amber limits, milk density, and the **SNF formula**.
- **Users** (admin) — one login per person with the right role. Untick *Active* to block someone.
- **Audit Log** — every save, cancel and login, with who did it and when.

> Nothing in the lists is deleted; untick **Active** to stop using a product, item or person. Old records keep their name.

Products

Users

12. Going live checklist

1. **Users**: change the *admin* password; create one login per person; deactivate the demo users (manager, qc, production, store, dispatch, accounts).
2. **Products**: check every product's **stock unit** and **litres per unit** against how you count it in the cold room; add missing products; set the sort order to match your Excel sheet.
3. **General store items**: replace the examples with your real items and reorder levels.
4. **Suppliers, tankers, distributors, routes, vehicles**: enter your real lists.
5. **Settings**: check the loss limits, milk density and SNF formula.
6. **Opening stock** (manager): on *Return / Damage / Receipt*, use *Opening stock* for each product with the closing balance from the Excel sheet, dated the day before you start. Do the same in the general store.
7. Run one full day in the system next to the Excel sheet and compare the Cold Room Record with it.

> **Negative balances in the Excel sheet** (for example Whole Milk Loose 4.2 Fat at −70,765) cannot be opening stock — find the cause and start from the real counted quantity.

13. Messages and what they mean

Message	What to do
Only X … of *product* in stock	You are taking out more than the cold room / store has. Check the quantity, or enter the missing receipt / production first.
… is counted in cups — enter a whole number	Packets, cups and pieces cannot have decimals.
Write the reason for rejection in Remarks	Rejecting a tanker needs a remark.
Adulteration found … Write a remark to accept	Write why the milk is accepted, or reject it.
Loss is X% (above Y%). Write a closing note	Explain the batch loss in the closing note, then close.
Enter the milk allocated to this batch before closing	Add the litres in step 1 of the batch.
Date cannot be in the future	Check the date box.
You do not have access to that page	Your role cannot use that page; ask a manager.
Wrong username or password	Check spelling (passwords are case-sensitive); an admin can reset it in Users.

14. Quick reference

Task	Menu	Steps
Milk QC (accept)	Milk QC & Receiving → + New QC entry	Supplier, vehicle, litres, temp, fat, lacto → Accept
Milk QC (reject)	same	… tap adulterant, write remark → Reject tanker
Production batch	Production → + Open new batch	Milk → ingredients → standardised → output → by-products → packaging → Close batch
Dispatch	Dispatch → + New challan	Distributor, vehicle → add products → Dispatch challan → Print
Market return	Return / Damage / Receipt	Product, qty, distributor, sellable? → Save return
Used / damage	Return / Damage / Receipt	Product, qty, reason → Save
Evening count	Daily Count	Type counts + remarks → Save count; manager → Book differences
Store purchase	General Store	Item, qty, supplier, bill → Save receipt
Store issue	General Store	Item, qty, department → Save issue
Day report / Excel	Reports → Cold Room Record	Pick the day → Download Excel or Print

In testing, a QC entry took 7 entries/clicks, a market return 4, a store issue 4, a 4-product challan 16, and a complete production batch with three products 27.
